## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Sperlich et al (US 6,080,232). Sperlich teaches a pigment that may be deposited as a color paste by screen-printing, which is considered a coating on a substrate. The pigment is a mixed oxide that may include lanthanum and titanium, and the color of the pigment may be grey to deep black.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sperlich et al (US 6,080,232). Sperlich teaches a pigment as discussed above, but does not give a specific example including lanthanum and titanium. As it is taught by Sperlich that one or more of the trivalent elements may be present in the oxide, and lanthanum and titanium are two choices from the limited selection of elements, it would have been obvious to one of ordinary skill in the art at the time of the invention to chose these elements since it is clearly taught by Sperlich that they may be included in the mixed oxide and have a reasonable expectation for successfully forming the pigment composition.

*Allowable Subject Matter*

Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

*Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer C McNeil whose telephone number is 703-305-0553. The examiner can normally be reached on 9AM-6PM.
